

Solution Requirements

<i>Date</i>	01 October 2026
<i>Team ID</i>	SWTID-2026-4323
<i>Project Name</i>	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
<i>Maximum Marks</i>	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should do).
- Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should be).

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users should securely log in to ServiceNow using their authorized credentials.	High
2	Authorization levels	Employees can submit laptop requests, approvers can approve requests, and the Hardware team can access and process assigned Catalog Tasks.	High
3	External interfaces	The solution should use ServiceNow Service Catalog, Requested Items, Approvals, Flow Designer, and Catalog Tasks within the ServiceNow platform.	Medium
4	Transactions processing	The system should process the Standard Laptop request, approval, and automatic Catalog Task creation and assignment.	High
5	Reporting	The system should allow users and IT teams to view request and Catalog Task status for tracking the procurement process.	Medium

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
6	Business rules, etc.	When a Standard Laptop request is approved, Flow Designer should automatically create a Catalog Task, set the short description to "Laptop need to Configured", and assign it to the Hardware group.	High
7	Compliance to laws or regulations	The solution should follow the organization's ServiceNow access-control and data-handling requirements for employee and request information.	Medium
8	Other	The Standard Laptop Service Catalog item should be connected to the Standard Laptop Task Flow so that the automation runs for the intended request.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The Flow should process an approved Standard Laptop request without unnecessary delay.	Catalog Task should be created automatically after approval within the normal ServiceNow Flow execution time.
2	Scalability	The solution should support multiple Standard Laptop requests without requiring manual task creation for each request.	Flow should process multiple approved requests independently.
3	Security & Data Privacy	Only authorized users should be able to access requests, approvals, and Catalog Tasks according to their roles.	Access should follow ServiceNow role and ACL permissions.
4	Reliability & Availability	The automation should consistently create and assign the Catalog Task when the Standard Laptop request is approved.	Approved requests should generate the required Catalog Task without manual intervention.
5	Usability & Accessibility	The Standard Laptop request and its status should be easy for employees and IT teams to understand and track.	Users should be able to submit the request and view its status through the Service Catalog.
6	Other – Maintainability	The Flow should be clearly configured so that IT administrators can understand and maintain the automation.	Flow name, trigger, actions, assignment group, and task details should be clearly defined.
