

Performance Testing

Date	01 October 2026
Team ID	SWTID-2026-4323
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	ServiceNow Flow Designer / ServiceNow platform
Type of Testing	Functional Load Testing
Target Module / API	Standard Laptop Service Catalog and Standard Laptop Task Flow
Test Environment	ServiceNow Developer Instance / Cloud
Test Date	01 October 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Submit a Standard Laptop request through the Service Catalog	1	30	Request should be submitted successfully
2	Approve the Standard Laptop request	1	30	Request should move to the approved state
3	Verify automatic Catalog Task creation after approval	1	30	Catalog Task should be created automatically
4	Verify task assignment and description	1	30	Task should be assigned to Hardware with the required description

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 sec	Pass	Measured during Standard Laptop request
2	Response Time (Max)	< 5 seconds	2.8 sec	Pass	Maximum observed response time
3	Throughput (Req/sec)		0.83 req/sec	Pass	Requests processed during test
4	Error Rate	< 1%	0%	Pass	No unexpected workflow failures should occur
5	CPU Utilization	< 80%	35%	Pass	Observe if available in the test environment
6	Memory Utilization	< 80%	48%	Pass	Observe if available in the test environment

Step 4: Observations & Analysis

Key Findings:

The Standard Laptop procurement workflow was tested from request submission through approval and automatic Catalog Task creation. The Flow Designer automation successfully supports the intended procurement workflow. After approval, the Catalog Task is generated with the required configuration description and assigned to the Hardware group.

Bottlenecks Identified: removed unnecessary workflow steps and verified approval-to-task execution. Validated task description and Hardware group assignment.

Optimization Steps Taken:

Note: The performance values above are sample/illustrative values and should be replaced with actual measurements from the testing tool before formal submission.

Step 5: Screenshots / Evidence

Attachscreenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):
